

Slotify – Feature Documentation

1. Overview

Slotify is a **multi-tenant booking and marketplace platform** designed for **any service-based organization**. It enables organizations to manage locations, services, staff availability, customer bookings, payments, and communications while also participating in a centralized marketplace for discovery.

Slotify is built as **booking infrastructure**, not just a booking tool. It supports white-labeled organization websites, marketplace discovery, and scalable monetization.

2. Core Architecture

2.1 Multi-Tenancy

- Organization-based data isolation using `orgId`
- Each organization operates independently
- Shared platform with centralized admin controls

2.2 Subdomain-Based Organizations

- Auto-generated subdomain per organization
- Example: `orgname.slotify.com`
- Organization-specific data, branding, and booking flow
- Dynamic theme colors and templates per org

2.3 Technology Stack

- Backend: Node.js, Express
 - Database: PostgreSQL (Sequelize ORM)
 - Frontend: React + Tailwind CSS
 - Payments: Razorpay
 - AI: OpenAI (GPT-4o)
 - Notifications: Email (Nodemailer), SMS/WhatsApp (planned/optional)
-

3. Marketplace Features

3.1 Marketplace Discovery

- Public `/marketplace` page
- Lists organizations that opt into marketplace visibility
- Category-based browsing for organizations
- Clicking an organization redirects to its subdomain booking site

3.2 Organization Categories

Organizations are categorized for discovery (not logic): - Diagnostics & Labs - Clinics & Hospitals - Salons & Wellness - Professional Services - Education & Training - Government Services - Home & Field Services - Corporate & Enterprise - Other

3.3 Marketplace Controls

- Marketplace visibility toggle per organization
 - Marketplace ranking and featured placement
 - Future-ready for sponsored listings
-

4. Organization Management

4.1 Organization Profile

- Organization name, logo, description
- Category selection
- Contact details
- Theme color & template selection

4.2 Location Management

- Multiple locations per organization
 - Location-first booking flow
 - Location-based services and availability
-

5. Service Management

5.1 Services

- Create and manage services per organization
- Service duration
- Service descriptions (manual or AI-generated)
- Service-to-location mapping

5.2 Service-Level Pricing

- FREE services
 - FULL payment services
 - ADVANCE payment services
 - Location-based pricing support
-

6. Staff & Team Management

6.1 Team Structure

- Staff profiles
- Role-based access:
 - org_admin
 - staff

6.2 Staff Availability

- Staff working hours
 - Breaks
 - Service-specific staff assignment
-

7. Booking System (Core Engine)

7.1 Public Booking Flow

No login required.

Flow:

Location → Service → Date → Slot → Customer Details → Payment (if required) → Confirmation

7.2 Booking Capabilities

- Real-time slot availability
- Conflict prevention via database transactions
- Human-readable booking IDs (e.g., BK-X9Z2P1)
- Secure public access tokens for booking management

7.3 Booking Status Lifecycle

- CONFIRMED
- AWAITING_CONFIRMATION
- COMPLETED
- CANCELLED
- NO_SHOW

7.4 Completion & No-Show Handling

- Automatic transition to AWAITING_CONFIRMATION after end time
- Staff/admin can mark:

- Completed
 - No-show
 - Reviews allowed only after COMPLETED status
-

8. Booking Management

8.1 Admin & Staff Actions

- Reschedule bookings
- Cancel bookings (with reason)
- Mark bookings as completed
- Mark no-shows

8.2 Customer Self-Management

- Secure email links to:
 - Reschedule
 - Cancel
 - Leave review (post-completion)
-

9. Payments & Billing (Phase 3A)

9.1 Razorpay Integration

- Razorpay checkout per booking
- Booking confirmed only after payment success
- Payment statuses:
- PENDING
- PAID
- FAILED

9.2 Platform Commission (Hidden)

- Commission configured per organization
- Percentage or fixed commission
- Captured automatically on booking payment

9.3 Vendor Ledger

- Ledger entry per paid booking
- Tracks:
- Gross amount
- Platform commission
- Net payable to vendor
- Manual payouts handled by platform admin

10. Notifications

10.1 Email Notifications

- Booking confirmation
- Reschedule confirmation
- Cancellation confirmation
- Automated reminders:
 - 24 hours before
 - 1 hour before

10.2 SMS & WhatsApp (Optional)

- Opt-in per organization
 - Template-based messages
 - Non-blocking notification delivery
-

11. Reviews & Ratings

11.1 Verified Reviews

- Only customers with COMPLETED bookings can leave reviews
- One review per booking
- Rating (1–5 stars) with optional comment

11.2 Moderation

- Reviews require approval
- Organization admin moderation
- Platform admin override

11.3 Display

- Average rating and total reviews shown in marketplace
 - Reviews displayed on organization subdomain pages
-

12. AI Studio (Key Differentiator)

12.1 AI Website Builder

- AI-generated:
 - Hero headline
 - Subheadline
 - About section

- FAQs
- Testimonials
- Structured JSON output auto-applied to org site

12.2 AI Service Content

- Bulk generation of service descriptions
 - Tone and context-aware generation
-

13. Security & Compliance

13.1 Access Control

- Role-based access control (RBAC)
- Public customer role with restricted permissions

13.2 Audit Logging

- Logs critical actions:
 - Booking creation
 - Reschedule
 - Cancellation
 - Completion
 - No-show
- Financial actions
- Captures user, IP, and data changes

13.3 Public Tokens

- Secure, time-limited JWT tokens
 - Used for booking management and reviews
-

14. Reporting & Automation

14.1 Automated Cron Jobs

- Booking reminders
- Booking status transitions
- Daily activity summary

14.2 Daily Reports

- Total bookings
- Estimated revenue
- Sent to organization contact email

15. What Slotify Is Not (Yet)

- Multi-vendor cart
 - Marketplace checkout
 - Automated payouts
 - Refund automation
 - Tax/GST handling
-

16. Summary

Slotify is a **scalable, category-agnostic booking infrastructure** that combines: - Marketplace discovery - White-labeled organization websites - Robust booking engine - Payments and monetization - AI-powered content

It is designed to serve **all service-based organizations** while remaining extensible for enterprise and marketplace use cases.
